Senior Software Engineer Identity and Integrations

Description

Memora Health works with leading healthcare organizations to make complex care journeys simple for patients and clinicians so that care is more accessible, actionable, and always-on. Our team is rapidly growing as we expand our programs to reach more health systems and patients, and we are excited to bring on a Senior Software Engineer. The Senior Software Engineer role will have the critical responsibility of enhancing and evolving Memora's product architecture. The ideal candidate will be able to lead complex projects from start to finish and across multiple release cycles. Additionally, this role will work closely with engineering to tackle a wide variety of health care integration infrastructure needs and help build an efficient and scalable service, delivering quality features and a great customer experience Ideal candidates will not only be driven by the problem we are solving but also by the innovative approach and technology that we are applying to healthcare – looking to make a significant impact on healthcare delivery. Weâre looking for someone with exceptional curiosity and enthusiasm for solving hard problems. Primary Responsibilities: Work closely with engineering as well as cross-org teams to tackle a wide variety of health care integration infrastructure needs and help build an efficient and scalable service, delivering quality features and a great customer experience. Lead the design, development, deployment, and iteration of complex features, collaborating with Engineers, Customer Success, Product Managers, UX designers, and leadership Enhance and evolve Memora's product architecture. Collaborate closely with cross-functional teams to understand customer pain points and identify, prioritize, and implement re-usable integrations. Promote product development best practices, supportability, and code quality, both through leading by example and through mentoring other software engineers Keep current with emerging industry trends and technology to inform leadership and the Product Team   Qualifications (Required): 7+ years experience in shipping enterprise-grade software products. Experience leading complex projects from start to finish and across multiple release cycles, including conceptualization, product integration, deployment, monitoring, and upgrade Ability to write readable, testable, and supportable code in JavaScript, TypeScript, Node.js (Express), or Python (Flask, Django, or FastAPI) Experience with Authentication & Authorization frameworks / methods and Integrations. Inclination toward test-driven development and test automation Ability to collaborate with Product Management and Customer Success to clarify requirements, scope work, and drive product deliverables Excels in mentoring junior engineers Advanced understanding of DevOps practices and technologies (Docker, Kubernetes, CI / CD, release management) Experience with security tooling in SDLC and Security by Design principles Experience with observability and APM tooling (Sumo Logic, Splunk, Sentry, New Relic, Datadog, etc.) B.S., M.S., or Ph.D. in Computer Science or other quantitative fields or related work experience   Qualifications (Bonus): Experience with event driven architecture/technologies (RabbitMQ, Kafka, BullMQ, etc) Experience with Nodejs build systems (rush, nx, vite, etc.) Experience with Mirth Connect integration framework Experience in health tech Experience working at a startup This position offers remote flexibility allowing employees to work from home in any of the following hubs: Seattle, WA; Bay Area, CA; New York City, NY; and Chicago, IL. What You Get: An opportunity to work on a rapidly scaling care delivery platform, engaging thousands of patients and care team members and growing 2-3x annually Enter a highly collaborative environment and work on the fun challenges of scaling a high-growth startup Work alongside world-class clinical, operational, and technical teams to build and scale Memora Shape how leading health systems and plans think about modernizing the care delivery experience for their patients and care teams Improve the way care is delivered for hundreds of thousands of patients Gain
