Senior Analytics Data Engineer

Description

At Trunk, our mission is to help teams create high-quality software quickly. Merge conflicts, poor code quality or consistency, flaky tests, and dozens of other distractions quickly drain the productivity and morale of those teams. Engineering teams that can stay focused on designing, implementing, and delivering software will build magical, high-quality projects – and they will be happier doing it. We're building the tools that empower teams to land code faster and develop happier.We are building the foundation for a modern software engineering team. Our founders started this journey in 2021 and have designed, delivered, and scaled software at some of the world's largest and fastest-growing tech companies – Uber, Google, YouTube, and Microsoft. We're building a game-changing company, and we hope you are excited to be a part of that audacious goal.Software has eaten the world; almost every company produces software in some form or fashion, so our addressable market is virtually every company on earth. We're going after every engineering team on the planet – we're starting with smaller teams, but there are literally hundreds of thousands of companies out there for us to empower and maybe only a handful (Google, Facebook, Amazon), that are outside our scope. We are building the DevEx platform to empower the world.In 2022, we raised a $25M Series A led by Initialized Capital (Garry Tan) and a16z (Peter Levine), with investments from Haystack Ventures, Garage VC, Tom Preston Warner (Founder/CEO of GitHub), Geoff Schmidt (Founder/CEO Apollo GraphQL), Nicolas Dessaigne (Founder/CEO Algolia), and Oleg Rognysky (Founder/CEO Peopl.ai).nWhat you'll do ð❓❓â❓❓ð❓❓»Build data pipelines, text analysis algorithms, query engines, and decision making enginesApply robust and fault-tolerant approaches to create scalable ingestion and data-processing systemsDebug, profile and optimize distributed data-intensive applicating, improving their latency, accuracy, resource consumption, and throughputWork with existing applications built with Spark, S3, Timescale, Python and RustDirectly implement services and features that leverage the results of your data pipelineImplement and improve machine learning and data pipelinesWe're looking for ð❓❓❓5+ years of experience as an engineer with a strong understanding of key concepts in distributed systems3+ years of extensive experience in building and deploying data applicationsFluency in at least one, and ideally more than one, of these languages: Java/Scala/Kolin, Python, Go, Rust, or C++Good understanding of following concepts: partitioning, replication, map-reduce, indexing, and CAPExperience with distributed storage systems (S3, HDFS, Hive, ClickHouse, Elastic, etc), distributed processing engines (Spark, etc), and message queues (Kafka, SQS, etc)Passion for building large-scale ML applications and improving software engineers' productivitySome understanding of key concepts in natural language processing, machine learning, or statistical analysisSome experience with machine learning stack (pandas, PyTorch, numpy, sci-kit, transformers, etc)What we offer ð❓❓❓Unlimited PTOCompetitive salary and equityWork-life balanceFlexibility to be fully or partly remoteFew meetings, so you can ship fast and focus on buildingOne Medical membership on us!Top-notch medical, dental, vision, short-term disability, long-term disability, and life insuranceAll insurance is 100% company-paid ($0 premiums) for employees and highly subsidized for dependantsFSA, HSA with company contributions, and pre-tax commuter benefits401(k) planPaid parental leave (up to 12 weeks)nThe salary and equity range for this role are: $170K – $210K and .15% – .35%.Donâ❓❓t meet every single requirement? At Trunk, we are dedicated to building a diverse and inclusive workplace, so if youâ❓❓re excited about this role but your past experience doesnâ❓❓t align perfectly with every qualification in the job description, we encourage you to apply anyways. You may be just the right candidate for this or
