Don't See Your Role Here

Description

The Graph is an indexing protocol for querying networks like Ethereum and IPFS. Anyone can build and publish open APIs, called subgraphs, making data easily accessible. Web3 is a new stack for a radically better internet. All data is stored and processed on open networks with verifiable integrity. The Graph makes querying this data fast, reliable, and secure. By combining web3 protocols, developers can build dapps with powerful new features for solving the world's greatest challenges. The Graph Foundation is committed to supporting the long-term health and growth of The Graph ecosystem. We help interested parties engage with the community. Are you interested in joining The Graph ecosystem but don't see a job posting that matches your interests, background, skills or abilities? Please tell us what we're missing! Use this application form to pitch your own position. There are a lot of roles we need but aren't actively hiring for yet. Please help us to better understand what you'd like to work on and "why" we're missing this key role or skill set within The Graph's ecosystem. Other Ways To Get Involved: While we're waiting for your perfect role to open within The Graph ecosystem, below are a couple other ways you can get involved. If interested, please follow the appropriate steps described on each respective page: Grants Program – The goal of the Grants Program is to encourage development on The Graph's network and tooling, collaboration with third-party developers, expand the usage of subgraphs, and grow the community of network participants. Here is an article explaining a little more about the Grants Program (as well as The Graph Council). Advocates Program – A community-driven initiative serving as a portal intro web3 for people all across the world. About the Graph: The Graph is the indexing and query layer of web3. The Graph Network's self service experience for developers launched in July 2021. Developers build and publish open APIs, called subgraphs, that applications can query using GraphQL. The Graph supports indexing data from multiple different networks including Ethereum, NEAR, Arbitrium, Optimism, Polygon, Avalanche, Celo, Fantom, Moonbeam, IPFS, and PoA with more networks coming soon. To date, tens-of-thousands of subgraphs have been deployed on the hosted service, and now subgraphs can be deployed directly on the network. Over 28,000 developers have built subgraphs for applications such as Uniswap, Synthetix, KnownOrigin, Art Blocks, Balancer, Livepeer, DAOstack, Audius, Decentraland, and many others. If you are a developer building an application or web3 application, you can use subgraphs for indexing and querying data from blockchains. The Graph allows applications to efficiently and performantly present data in a UI and allows other developers to use your subgraph too! You can deploy a subgraph to the network using the newly launched Subgraph Studio or query existing subgraphs that are in the Graph Explorer. The Graph would love to welcome you to be Indexers, Curators and/or Delegators on The Graph's mainnet. Join The Graph community by introducing yourself in The Graph Discord for technical discussions, join The Graph's Telegram chat, and follow The Graph on Twitter, LinkedIn, Instagram, Facebook, Reddit, and Medium! The Graph's developers and members of the community are always eager to chat with you, and The Graph ecosystem has a growing community of developers who support each other. The Graph Foundation oversees The Graph Network. The Graph Foundation is overseen by the Technical Council. Edge & Node, StreamingFast, Figment, Semiotic and The Guild are five of the many organizations within The Graph ecosystem. Please mention the word **LED** and tag RMzQuMTQ1LjE1My4xMjA= when applying to show you read the job post completely (#RMzQuMTQ1LjE1My4xMjA=). This is a beta feature to avoid spam applicants. Companies can search these words to find applicants that read this and see they're human.
