Developer Relations Engineer

Description

About this role Synternet is a blockchain that powers real-time data infrastructure on any chain. Its foundation is the Data Layer, a protocol that enables chain-agnostic data composability in real-time. We are looking for a Developer Relations Engineer to join our technology organization and act as the bridge between Synternet and our technical audiences. This is an opportunity for someone with a solid technical background to make an impact from day 1 by contributing to a variety of different Developer-focussed projects and initiatives, and to learn and expand your skillset by gradually taking up a wider variety of work and more responsibility. The ideal candidate for this role will be a passionate technologist who likes to get involved in different ways, wants to tinker, learn,progress, and enjoys interacting with technical communities. You will join a company filled with like-minded people who understand the purpose and impact of our project, and you will help to fulfill that purpose. Find out more at https://www.synternet.com/ We prefer the candidate to be based in Lithuania for easier face-to-face access with your team, however as we're remote-first, you can be based anywhere, as long as you're aligned with European time zones. Main responsibilities From the start of your journey, you will be expected to carry out the following tasks: Documentation ownership and regular updates: Take ownership of our documentation, ensuring that it remains comprehensive, up-to-date, and easily accessible to developers and users. Regularly update the documentation to reflect changes in the protocol, new features, and best practices for integration and usage. Technical Community Engagement: Interact with developers, builders, and enthusiasts through platforms like Discord (and Telegram). Provide guidance, answer questions, and foster a supportive community environment. Public Release notes publication: Compile and publish comprehensive release notes for our public releases. Open-source advocacy and management of repositories: Work with the engineering team to ensure our preparedness for open sourcing and community participation developing the protocol. This includes documentation, shared naming and contribution policies, and maintaining and managing the open-source repositories associated with Synternet. Additionally, either from the start or gradually, you will work on the tasks and projects below: Technical Collaboration: Collaborate closely with the engineering team to understand the technical intricacies of the public-facing elements of the Data Layer and convey this externally. Developer Events: Organize both external and internal developer-focused events such as hackathons, meetups, and Builders Townhalls. These events will foster learning, collaboration, and innovation within the Synternet community. External Project Support: Offer support and guidance to developers working on external projects that utilize the Synternet Data Layer, helping them overcome challenges and maximize the potential of our technology. Video Tutorials: Create video tutorials that guide developers through various aspects of using the Synternet Data Layer. These tutorials will be valuable resources for both newcomers and experienced users. Management of Builders' initiatives: Shape the future of the Synternet Builders program and similar initiatives, which includes reviewing applications, conducting interviews, and nurturing a vibrant community of builders. Cooperation with Marketing: Collaborate with the marketing team to shape messaging and content related to the Synternet Data Layer. Help drive developer engagement through targeted campaigns and initiatives. Shaping Protocol for Data Layer: Provide valuable feedback from the developer community to help shape the future direction and features of the Synternet Data Layer. Conference / Hackathon Presence: Represent Synternet at blockchain conferences and events, running live workshops, presentations, and networking with developer communities. Requirements 2+ years experience in programming/engineering: Node.js / Golang / Python preferred. A broad understanding of various technical disciplines and a
