Developer Relations Sygma

Description

ChainSafe is a leading blockchain research and development firm specializing in infrastructure solutions for the decentralized web. Alongside its contributions to significant ecosystems such as Ethereum, Polkadot, Filecoin, Mina, and more, ChainSafe creates solutions for developers and teams across the web3 space utilizing our expertise in gaming, bridging, NFTs, and decentralized storage. As part of the mission to build innovative products for users and better tooling for developers, ChainSafe embodies an open-source and community-oriented ethos. To learn more about ChainSafe, look at our Discord, GitHub, and website. Hereâ??s what you need to know before reading on: Our progressive tech stack includes Go, Rust, and TypeScript We spearhead ecosystem projects like Lodestar, Web3.js, Forest, Mina-rs, and Gossamer We are global, remote-friendly, and open to contractors At ChainSafe, youâ??ll be part of a team that believes in the community's vital importance and contributes to advancing humanity with open-source and decentralized technology. The following details a description, responsibilities, requirements, and otherwise supporting information for those seeking to work in a Developer Relations/Advocacy role for Sygma. Description ChainSafe is seeking a motivated Developer Relations individual to represent Sygma – The interoperability layer for building cross-blockchain applications. We believe that cross-chain interoperability is the fundamental enabler for the next wave of growth in the blockchain industry. Sygma will empower builders to create streamlined experiences where users are not confined to one ecosystem. By enabling elaborate cross-chain functionality and putting most of the steps under the hood, Sygma will enable smooth, web2-like user experiences. Please find more information about Sygma on the Sygma Website. The ideal candidate will have experience working in the software product development cycle with an emphasis on developer user experience, including education and community engagement. An individual in this role will work closely with the Marketing, Communications teams as well as with specific-product teams within ChainSafe. Much of the work will consist of engaging with our ever-growing Discord community, contributing to or participating in ecosystem events (ie, Devcon, ETHDenver), and otherwise supporting ChainSafe's vision of educating and empowering the next million developers into the web3 ecosystem, by way of Sygma. Weâ??re looking for a versatile individual who understands developer's needs and struggles and is ready and able to apply creative strategies to solve interesting problems surrounding community engagement and helping to educate a global audience of developers transitioning into web3. Responsibilities Developer Success Definition and implementation of the Developer Success strategy for Sygma, including education, resources, outreach, community development, and feedback. Assisting customers with the design and implementation of their cross chain applications using Sygma. Propose tailored cross-chain solutions to different prospect communities and facilitate respective cross-chain related discussions in forums and beyond. Owning and managing our developer documentation site. Writing content (technical by nature) to be used for a variety of purposes including: video walkthroughs, tutorials, blog posts and case studies. Community Engagement Serve as the key intermediary between Sygma Labs' development team and the external developer ecosystem. Offering mentoring, support and guidance for Sygmaâ??s developer ecosystem and its communities (Discord, Twitter); both online as well as offline/physical events (ie, meetups, hackathons, conferences). Participate in relevant discussions around interoperability and become a vocal ambassador for Sygma Engaging with the Sygmaâ??s ecosystem of developers and extended community to collect feedback and report back to the team for continued product improvement. Ecosystem-Driven Feedback Absorbing a wide scope of
