# Software Engineer Front End Developer

## Description

The Position   We believe front-end development is about understanding the challenges of modern web development and the tools available in the ecosystem to address them. As a Front-End Developer, you will be responsible for implementing static visual designs and interactive elements that users engage with through their web browser when using a web application.  You will work with the UI/UX designer and bridge the gap between graphical design and technical implementation, taking an active role on both sides and defining how the application looks as well as how it works. You will be supported by Back-End Developers, who are responsible for server-side application logic and integration of the front-end work. If you are a Front-End Developer who is passionate about your craft, motivated to combine the art of design with the art of programming, then you are right for this role. Your Responsibilities   Build UI components and compose them into applications for multiple browsers Analyze and understand business and design requirements; produce technical tasks and breakdown into estimates Define, review, communicate and follow development approaches for the technical tasks Collaborate with the back-end developers and QA engineers to integrate and test Work closely and collaborate with other developers and team members, communicating effectively and working together to reach defined goals and meet deadlines Attend and participate in daily standups and project retrospectives Participate in career development and performance reviews Commit to ongoing learning and development; participate in conferences and educational programs Stay up to date with current best practices Follow new and emerging technologies Participate and contribute to company culture About You  5+ years of experience working as Front-End Developer Excellent working knowledge of modern JavaScript Solid experience with semantic and accessible HTML Hands on experience with CSS3 and CSS-in-JS (styled-components) Proven knowledge of React (version 16 or higher) is a must Experience with mobile-first UI development Previous experience writing functional UI tests (Jest and react-testing-library) Hands on experience with i18n and l10n (react-i18next) Experience contributing to design-system component libraries Multiple yearsâ�� experience with source control management systems Demonstrable ability to write clean, structured, maintainable code Experience with automated testing and/or code analysis techniques Familiarity with development & release tooling (i.e. npm/Webpack/Babel/Github) Ability to analyze wireframes or static designs and identify potential issues or hidden complexities Proficient knowledge of cross-browser compatibility issues and ways to work around them In-depth understanding of web development and web development processes An understanding of the fundamentals of server-side rendering is nice to have Understanding the concepts of a headless CMS architecture is nice to have Experience with Sitecore CMS is nice to have Bachelorâ��s degree in computer science or related field is preferred Critical thinker, great analytical and problem-solving skills  Why Youâ��ll Love This Opportunity  Many opportunities to learn, grow, and earn certifications through our internal upskilling program Start-up work culture while getting to work on industry leading solutions for some of Canada's leading companies  Working with cutting edge cloud technologies  Exposure to teams Designing and building cloud-native software  Please mention the word **WELL** and tag RNTIuMzguODUuNzE= when applying to show you read the job post completely (#RNTIuMzguODUuNzE=).
