

Software Engineer iOS

Description

Weâare one of the world's leading carsharing platform, with millions of users around the world, sharing thousands of cars in over 950 cities across 8 countries. Our mission is simple: Make our cities better places to live through carsharing. Carsharing empowers people to move in a smarter and more sustainable way: studies show that one shared car replaces between 4 and 10 privately owned cars, which frees up space in our cities while giving communities 24/7 access to cars when they need them. With our connected car technology, users can quickly and easily book and unlock a wide variety of vehicles directly from our app, without ever having to meet anyone in person, carry an access card, wait in line, or coordinate picking up keys. To reach our vision of a world where all cars are shared, we need a strong team to help us disrupt car ownership. We look for people who are curious, positive, and engaged; who can adapt and learn quickly; who have the skills and smarts to reach their goals autonomously, while having the generosity and mindset to work collaboratively. No matter your role, background, or level of experience, we believe that every member of the team can have an impact. Weâare extremely proud to be certified in the âBest Workplacesâ in 2023 !n The opportunity: As an iOS Software Engineer, you'll enhance the car rental experience of our iOS application by creating seamless and reliable software. Collaborate with product, design, and backend teams to deliver exceptional user interfaces. Develop new features, ensure smooth UI performance, and improve our delivery process. Keep our tech stack up-to-date and contribute to our design system. Your work will directly impact our users and market, driving our mission. Youâwill be a key member of our Bookings squad focusing on driving more bookings with a given supply. You'll belong to an international mobile team composed of 10 members, and will report to Renaud, our Mobile Chapter Lead. What you'll do: Work closely with our product, design teams, backend developer and data analyst to deliver great user experience and pixel-perfect interfaces inside squads. Work on great features that make car rental easy and frictionless. Keep our UI smooth. Improve our delivery process with tests, continuous integration. Keep our tech stack state of the art: we always evaluate what is best for our needs. Always find ways to make our app more flexible. You will use and contribute to our in-house design system. Our stack: Swift 5 / SwiftUI Swift Concurrency Swift Package Manager Fastlane XCUITest Circle CI. What you'll bring: Getaround handles thousands of rentals a day and making a non-virtual experience frictionless is a big challenge. For that, we're looking for rigorous people with a strong product mindset who cherish creating highly reliable software in a collaborative and inclusive environment. 1 to 3+ years of experience. Experience shipping at least one excellent iOS app, ideally currently available on the App Store. Strong understanding of what makes a good UX. Deep understanding of the iOS SDK. Experience with RESTful APIs. Strong object-oriented and architectural skills. Meticulous mindset but you also understand that software engineering is about making trade-offs, balancing business and technical needs. Good communication skills, comfortable working in a team, and can easily work with non-technical colleagues. Comfortable with the English language (written and spoken). Why join us: ð A remote friendly policy: this position is based in our Paris office with up to 3 days of remote work per week or full remote accepted. ð Getaround Europe is a fast-growing startup located in the center of Paris, with global headquarters in San Francisco and an office in Oslo. We offer one of the most dynamic and diverse company cultures in town, and give every employee the opportunity to grow and the power to define their impact at Getaround. ð The opportunity to have a positive impact on climate change. Cars are responsible for 17% of carbon emissions. In France, an independent study has shown that each connected car shared on Getaround replaces more than 5 self-
