## Senior Performance Test Engineer

### Description

LivePerson (NASDAQ: LPSN) is the global leader in enterprise conversations. Hundreds of the world's leading brands including HSBC, Chipotle, and Virgin Media use our award-winning Conversational Cloud platform to connect with millions of consumers. We power nearly a billion conversational interactions every month, providing a uniquely rich data set and safety tools to unlock the power of Conversational AI for better customer experiences. At LivePerson, we foster an inclusive workplace culture that encourages meaningful connection, collaboration, and innovation. Everyone is invited to ask questions, actively seek new ways to achieve success, and reach their full potential. We are continually looking for ways to improve our products and make things better. This means spotting opportunities, solving ambiguities, and seeking effective solutions to the problems our customers care about. Overview Over the next three years, our goal is to transform the 268 billion analogue phone calls between a brand and its consumers to digital on the LiveEngage platform. By doing this, we enable consumers to get back time and experience a more connected relationship with the brand in which sales, service, marketing, branches, stores, and contact center's become a unified experience. The successful candidate has an opportunity to join a highly outstanding team within a fast-paced and successful organization. You Will We are looking for a Software Development Engineer in Test (Load & Performance Testing) to develop and execute exploratory and automated tests to ensure product quality. SDET responsibilities include understanding system requirements, designing and implementing tests and in some cases debugging and defining corrective actions. You will also review system requirements and track quality assurance metrics (e.g. defect densities and open defect counts.) Review requirements, specifications and technical design documents to provide timely and meaningful feedback. Create detailed, comprehensive and well-structured test plans and test cases. Create System, Resiliency and Performance verification test plans and test cases. Estimate, prioritize, plan and coordinate testing activities. Design, develop and execute automation scripts using open source tools. Identify, record, document thoroughly and track bugs. Perform thorough regression testing when bugs are resolved. Develop and apply testing processes for new and existing products to meet client needs. Liaise with internal teams (e.g. developers and product managers) to identify system requirements. Monitor debugging process results. Investigate the causes of non-conforming software and train users to implement solutions. Track quality assurance metrics, like defect densities and open defect counts. Stay up-to-date with new testing tools and test strategies. You Have 5+ Years of experience. Experience with performance, resiliency and/or security testing is a must. Experience working with Chaos Monkey, JMeter, NodeJS is preferred. Strong programming skills in one of the languages such as: Java/Javascript. BS/MS degree in Computer Science, Engineering or a related subject. Proven work experience in software quality assurance. Strong knowledge of software QA methodologies, tools and processes. Experience testing SPA and REST based APIs in microservices based software. Experience in writing clear, concise and comprehensive test plans and test cases. Experience with QA automation tools, frameworks and libraries. Hands-on experience with both white box and black box testing. Hands-on experience with automated testing tools and libraries. Experience working in an Agile/Scrum development process. Experience testing high scalable distributed systems is a must. Knowledge of CI/CD and experience working with Jenkins or similar tools. Benefits: Health: Medical, Dental, and Vision. Time away: Vacation and holidays. Development: Generous tuition reimbursement and access to
