Engineering Manager Reservation & Guest

Description

Together we're on a mission to power every property in the world and to do that, we need to find the best talent in the world. That's why we're on the search for a superstar Engineering Manager. As an Engineering Manager at Cloudbeds, you will lead a remote team of Software Engineers to deliver frequent and high-impact value to our customers in over 150 countries. In an agile and high-growth environment, you will work across departments to eliminate obstacles by continuously experimenting with new and creative ideas to optimize performance, quality, and communication. This is an opportunity to be on the ground floor of a company completely transforming the world of travel technology. You will be an essential member of the team as we march toward our goal to power every lodging business in the world. Location: Remote – US/CA What You Will Do: Manage a high-performing, agile software team in a rapidly growing, global organization. Be a hands-on manager and be able to contribute to the codebase. Actively participate in coding and development tasks, contributing your expertise and technical skills to ensure the successful implementation of software solutions. Lead by example and be a role model for the team. Conduct regular code reviews to ensure adherence to coding standards, best practices, and maintainable code. Work closely with the team to identify and address technical challenges and ensure high-quality deliverables. Foster a collaborative and inclusive team environment. Promote effective communication, knowledge sharing, and cross-team collaboration to facilitate the successful execution of projects. Set performance expectations and conduct regular performance evaluations for team members. Provide feedback, coaching, and mentorship to support their growth and development. Identify opportunities for process optimization, automation, and efficiency improvements within the software development lifecycle. Implement best practices and establish scalable processes to enhance team productivity. Partner closely with engineering, product, and leadership to facilitate project delivery. You'll Succeed With: BS or MS in computer science or a related technical field 7+ years of backend development experience (e.g. PHP or Java) 2+ years of experience managing remote, international backend engineers A passion for delivering value to customers via agile software development. Excellent knowledge of SaaS software technologies, best practices, and design patterns Excellent project management and organizational skills Excellent time management, prioritization, and decision-making skills driving high-impact, rapid, and iterative change in a fast-moving environment Excellent communication, documentation, and presentation skills Experience with coaching and mentorship to elevate team performance Nice to Haves: Knowledge of Python, React, MySQL, Terraform Experience programming or supporting applications in Amazon Web Services Experience with service-oriented, micro-service, or serverless architectures Compensation: Depending on your skills and experience, you can expect your annual compensation to be between $180-230K. #LI-REMOTE #LI-SD1 Please mention the word **SIMPLER** and tag RNTQuMTg5LjEzMC4xODk= when applying to show you read the job post completely (#RNTQuMTg5LjEzMC4xODk=).
