

# Senior Cloud Data Architect AWS Japan

## Description

Location Our Senior Cloud Data Architect will be an integral part of our Cloud Reliability Engineering team in APAC. This role is based remotely in Japan (work from home) with occasional business travel to Tokyo. We are only looking for people who reside in Japan and can be legally employed there.. Who We Are DoiT is a global multicloud innovator that helps simplify the most important cloud challenges. Our vision is to deliver the true promise of the cloud by making it more accessible and transformative. Our mission is to help cloud-driven organizations understand and harness the cloud to drive business growth. We do this by providing intelligent and continuous engagement with unrivaled cloud expertise to buy, optimize, and manage the cloud with ease. With almost 2,500 years of collective cloud operations experience and \$1.7B in cloud spend under management. An award-winning strategic partner of Google Cloud and AWS; DoiT works alongside our 3,000+ customers to save them time and money. The Opportunity As a Senior Cloud Data Architect, you will be part of our global CRE team, working with rapidly growing companies in Japan, Asia, and around the world. Our approach is different – we prefer to teach people how to fish instead of fishing for them. Here is how we do it: a day in the life of a Cloud Architect @ DoiT. We are looking for people to join us on our mission and share the honour and delight of being able to help companies to realize their ideas into successful products. Responsibilities This role offers you the chance to: Apply your hands-on experience & skills in a consultative manner to address our customers' strategic and tactical needs around cloud technologies. Grow your technical and interpersonal skills by addressing customer challenges in your daily work and leveraging dedicated time allocated by the company for learning new technologies and engaging in internal initiatives. Strengthen your personal brand through thought leadership activities such as blogging, public speaking, and participation in technology events. Qualifications Verbal and written fluency in both Japanese and English. The expertise to architect, develop, and troubleshoot large production-grade distributed systems on AWS, and select the appropriate tools to tackle business problems at the right scale. Experience working with cloud data storage, data warehousing, and/or data lake architectures, ETL/ELT, and reporting/analytic frameworks and technologies like Redshift, Athena, Glue, and EMR. Experience with designing highly-available systems for serving transactional web-scale low-latency traffic using both RDBMS and NoSQL technologies such as AWS RDS and DynamoDB. A programming background with shell scripts and one or more of the following: JavaScript, Java, Python, Go, or Rust. Familiarity with debugging, refactoring, and optimizing code, and the experience to know when and how to automate tasks. Be open to study and work with Google Cloud Platform products. Bonus Points Experience with AI/ML technologies like SageMaker and Bedrock. Experience with QuickSight, or other BI visualization tools. Are you a DoiT'er? At DoiT, we value our transparent work culture. With a flat organizational structure, we empower every individual to provide direct feedback. This feedback not only influences our operations but also contributes to making our company an even better place to work. We are home to a global team of incredible talent who work remotely and have the flexibility to have a schedule that balances your work and home life. We embrace and support leveling up your skills professionally and personally. We're all about being entrepreneurial, pursuing knowledge, and having fun! Click here to learn more about our core values. We are a remote-first company, and you can work from anywhere in Japan. We've curated a culture that thrives in a virtual environment and will try to provide you with the resources you need to connect with colleagues from all around the world. We
